

## 1. Overview

Model EP-AP2106 PMT dual readout preamplifier, can lead photomultiplier tube playing take pole signal and anode signal at the same time. Completes the simultaneous measurement of the energy spectrum signal and time signal by a single detector. According to the user's specific situation, it can choose whether to equip with the original precision high-voltage power supply or not.

## 2. Performance parameter

Power supply	+9~+12V DC
High pressure adjustable range	0~+1000V
Typical Input High Voltage	+800V
Output Signal Type	Output of the dynode electrode, output of the anode signal
Applicable PMT models	CR105, CR115, CR125, CR135, CR160, CR173, CR185, R6231, R6233, etc.
